Art Unit: 2612

1. Claims 5-9 are objected to under 37 CFR 1.75(c) as being in improper form because a multiple dependent claim should refer to other claims in the alternative only and cannot depend from any other multiple dependent claim. See MPEP § 608.01(n). Accordingly, the claims 5-9 have not been further treated on the merits.

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-4 are rejected under 35 U.S.C. 103(a) as being unpatentable over Nee.

Nee discloses a system for detecting a physical abnormality on a person comprising sensor means 100 at a user's body, detection means 206 to detect an abnormality from a sensed signal (col. 5, lines 62-67), alarm means to trigger an alarm signal (col. 6, lines 4-9), transmission means 220 to transmit an alarm signal (col. 6, lines 10-13, 41-44), and receiving the alarm signal at a station 202 (col. 6, lines 41-44).

Since Nee teaches transmitting signals to an external station when a distress or other emergency condition is occurring (col. 3, lines 63-67), choosing to have an alarm signal be the sole transmitted signal would have been obvious, in order to reduce transmissions only during emergencies, thus conserving battery power and reducing processing of non-vital information.

Regarding claim 2, external station in Nee can be located at access point to a communications network (col. 7, lines 1-5), which is typically a stationary point, for subsequent transmission to a remote center (col. 4, lines 33-43).

Regarding claim 3, Nee teaches desirability of the home-based station 202 controlling a domestic communications device (col. 4, lines 34-43).

Regarding claim 4, Nee teaches desirability of transmitting person location (col. 4, lines 44-54) to a remote site from mobile base station (col. 6, lines 51-56).
